

SECURITY IS AN ENTERPRISE-WIDE BUSINESS RISK: Not just an IT problem!

Early Detection and Rapid Incident Remediation Is Mission Critical

"Coping with cybersecurity is one of the defining challenges facing business today. An endless stream of attacks from criminals, nation states and activists has companies on edge and uncertain of how to respond...you can't make your company invulnerable to attack, but you can cope."

– Steve Rosenbush, Editor of The Wall Street Journal's CIO Journal

Most companies put cybersecurity under the technology umbrella, which forces their IT teams to focus on patching and maintaining vulnerabilities to the best of their knowledge and skill. That is simply not enough. A proactive, holistic approach to protecting your business assets can prevent attacks, minimize damage, and ensure that your company survives an attack and recovers faster.

Trusted Cyber Defense Services

Our security solutions balance the demands of keeping your business safe without limiting innovation and growth. They are customizable to your business needs, and include:

ADVISORY SERVICES

- Improve your security maturity
- Apply industry best practices
- Establish governance and compliance practices
- Employee awareness training

CYBERSECURITY ASSESSMENT

- Vulnerability scanning
- Network Pentest
- Prioritization of discovered risks

Independent Risk Assessment Report: details significant security exposures and provides recommendations for prioritized remediation

REMEDIATION SERVICES

- Securing your systems
- Restoring back-up data post-attack
- Infection containment and clean up
- Upgrade vulnerable systems & hardware
- Digital forensic analysis

MONITORING AND INCIDENT RESPONSE

- Leveraging Artificial Intelligence and machine learning to detect anomalies, incidents and enable actionable insights
- Minimize attack induced downtime
- DDoS response & mitigation

Real-time protection and prevention, 24x7

Certifications

PCI Compliant

Global SOC II Type 1

ISO 9001 - 2018-2020

Our Approach

CGS provides a balanced approach that reduces the risk of cyber-attacks on your business, without bringing operations to a halt.

Our work begins with a Cybersecurity Assessment which includes interviews with technical and business executives, conducting vulnerability scans and network penetration testing. The findings are packaged into an independent Risk Assessment Report that provides you with the details on your most significant risk exposure, the potential consequences of an attack, and recommendations on remediation steps customized for your business needs, available resources and risk tolerance.

CGS Cybersecurity Monitoring services then collect and analyze the data from security events and related intelligence in real-time, 24x7. This enables you to respond to more immediate threats with greater agility without disrupting business operations.

We will be a proactive partner in managing threats and minimizing the financial and organizational impact that a disruption can have on your business operations. By outsourcing Cybersecurity projects, you free up your internal team to focus on your core competencies and the innovative projects that drive your business forward.
